Environment and Consumer Protection"* that  
will take place at Buzău, Faculty of  
Management Agrotourism,  
in October 23-24, 2015**

**Adress: Str. Hangarului, Nr. 8, Buzau**

Agriculture is a vital economic sector in the context of the continuous agro-food demand increase, determined by the economic development and the demographic growth.

Beyond the food security need, in its sustainable development efforts, the modern society has tried to focus on consumer protection, food safety and environment protection issues. In this respect, the continuous improvement of the legal framework in relation to these issues aims to support the production of top quality agro-food products, obtained under efficient production systems, which respect both the consumers and the environment.

Through its new regulations, the Common Agricultural Policy tries to address the economic, technological, social, environmental and climate challenges that the European countries have to face.

One of the main constraints that our society has to face at present is represented by the vulnerability of the agro-food system. This stems from the limited character of the available resources for agriculture, from the impact of climate changes upon these resources, from the increased need for agricultural products given by the competition between the demand for food commodities and the demand for bio-energy production.

In this complex context, it is knowledge that is meant to support business management in agriculture, food industry and agro-tourism, for promoting a sustainable and environment-friendly rural development, focused on people's welfare.

***The objective of this symposium is to put together and set forth under a high-class scientific forum the most recent ideas, experiences and results of the scientific research in agriculture, agro-tourism, food, agro-food economy and rural development, sustained by a strong legal framework in the field of food safety, environment and consumer protection.***

## **Symposium sections:**

1. Agriculture and environment
2. Agrifood economics, food technology and safety
3. Rural development and agrotourism
4. Legal framework on food safety, environment and consumer protection.
